CULTIVATED CAREERS

THE NEWSLETTER

Hey Pranjali,

A few weeks ago, I shared a Claude Cowork flow that finds jobs "while you sleep" on LinkedIn.

One of our clients took that and ran with it.

He set it up, let it run, and the next day it found him a high fit posting.

He used our system for applying + reaching out **and he landed an interview the same day**.

I want to share that Claude Cowork flow with you so you can use it to get the same results! Here's how:

Why Do This? Finding Jobs Then Vs. Now

Finding new jobs to apply for is one of the most exhausting parts of the job search.

Historically, you'd either:

- Doom Scroll LinkedIn jobs until your eyes water.
- Scan Company Lists for hours hoping to find something felt aligned.

Claude Cowork changes all that.

It can scan the entire internet for new jobs, then actively score them against criteria you set, and only share the roles that are a match.

Step #1: Build Your Scoring Criteria (Part 1)

First, we need to identify what a "great" job looks like to you. Head to Claude.ai and ask it to:

- Craft a highly detailed clarity assessment
- Aim for 10-15 questions that cover each category
- Ask each question one at a time.
- Use it to create detailed definitions for what "great" looks like for different categories
- Output via text and as a .md file for Cowork

***Pro Tip:** For every section, you can build the prompt out yourself or you can grab the copy and paste prompts here. I wrote them for you 😊*

Step #2: Build Your Scoring Criteria (Part 2)

In that same conversation, ask Claude to use the data to create a scoring methodology:

I want you to analyze this data and use it to craft a detailed scoring methodology that can be used to determine a "match score" for any company based on the job description and basic company research.

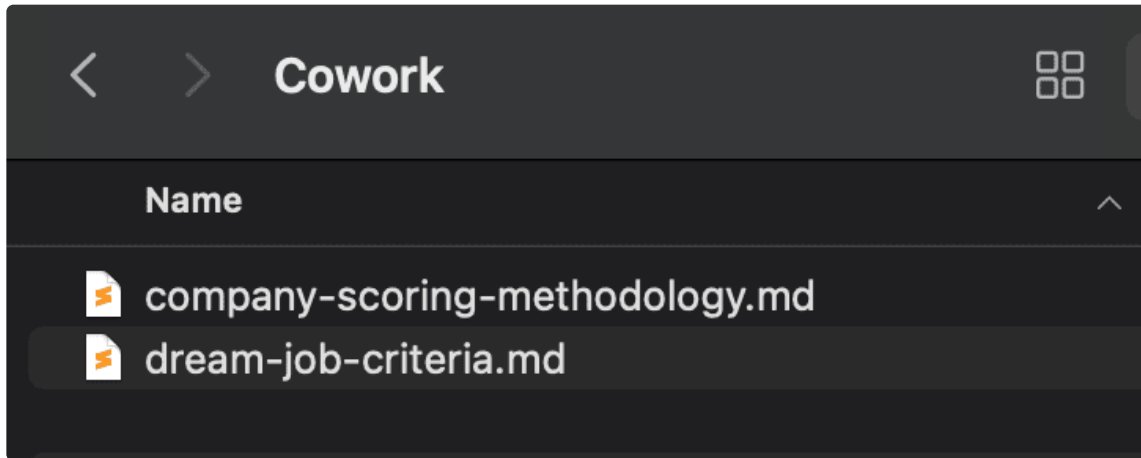

Tell it to output as text and a separate .md file that you'll use for Cowork.

Step #3: Add Your .md Files To Cowork

Claude Cowork works out of an assigned folder on your desktop.

I recommend creating one called "Cowork" or something similar where you house all of your files and outputs.

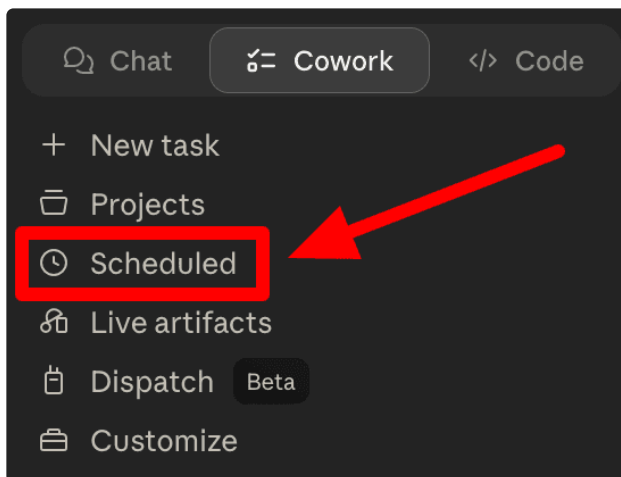

However you set it up, make sure to copy and paste the two .md files from the last two steps into the folder, like this:

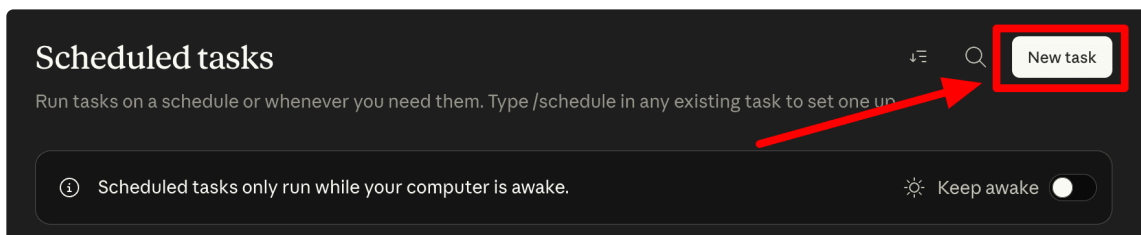

Step #4: Create A New Scheduled Task In Cowork

Open Claude Cowork in the desktop app.

Click "Scheduled" in the left hand menu:

Then select "New Task" in the upper right hand corner:

Note: Your computer needs to be "awake" for Cowork to run, so if you're scheduling this for a time when it's normally powered down, turn on the "Keep Awake" feature (bottom right of my screenshot).

Step #5: Build Your Claude Cowork Prompt

Now move to Cowork and build the prompt for your daily run. It should reference your two .md files from Step 4:

I'm looking for companies that are a strong fit for my job search. Your job is to find companies with open roles that match my criteria, score each one, and present the results in a structured format. Please use my "dream-job-criteria.md" file which offers a summary of my criteria and please use the methodology in my "company-scoring-methodology.md" to score each company.

Make sure your prompt covers every step of the research and scoring process. Again, if you want to skip writing them yourself, I have [copy and paste versions of the prompts here for free](#).

Step #6: Set Your Recurring Schedule

Next, choose when you want this to run.

If you want it to truly find jobs "while you sleep," set it for a time after you go to bed! Just make sure your machine is awake to run it.

I'm an old soul who likes to go to bed early, so I'd probably aim for an 8:30pm start time but you can set it for any time you'd like:

Frequency

Daily ▼ 08:30 PM

Scheduled tasks use a randomized delay of several minutes for server performance.

Cancel Save

Step #7: Select Your Model And Folder

Remember when I told you to add those .md files to your folder back in Step #4?

This is where you tell Claude which folder you put them in. That way Cowork can reference them when it runs and share the output in the same folder.

For the model, you can run with Opus:

Use these sources as a starting point: company career pages, LinkedIn Jobs, Greenhouse/Lever/Ashby job boards, Built In, Wellfound, but make sure to use web search to expand your search to cover as many resources as possible.

2. When you find a company, use the "company-scoring-methodology.md" to score it based on the criteria

Job Finder ▼ Ask ▼ Opus 4.7 ▼

Watch The Magic Happen!

Now, every night, Claude will search the web for jobs that meet your criteria AND are open for applicants right now.

In the morning, you'll wake up to a report with all of those jobs, the fit score, and a link to apply:

The prompts I wrote for you also include a detailed breakdown for each company and role:

Boom! Now you just automated one of the most exhausting parts of the job search AND improved the quality of roles you put into your funnel.

The next step?

Getting in the door.

This workflow found that job for our client, but the main reason he landed an interview in 24 hours was because he had a proven system for getting noticed by employers.

If you're seeing jobs you want but not getting replies? We can help.

>> [Click here to learn more about our coaching program and book a free 30 min, 1:1 Clarity Call with our team.](#)

They'll show you why your search strategy isn't working, and help you build a plan for landing predictable interviews and offers.

Be well,

Austin

Land a job you love without applying online.
